## Family Medicine Center Introduction:

The Family Medicine Center is staffed by board certified Family Physicians who see patients in the clinic, the hospital, on home visits, and also provide nursing home care. Many of them are also bilingual in English and Spanish.

These board certified Family Physicians also hold teaching appointments at the Paul L. Foster School of Medicine and supervise Family Medicine Residents and medical students. Residents are licensed medical school graduate physicians undergoing three additional years of training to become board certified Family Physicians themselves. These residents maintain their own practice within the Family Medicine Center.

Our Family Medicine practice provides continuous, integrated and comprehensive medical care that is accessible and affordable to each member of the family regardless of sex, age, or type of problem. We serve as each patient's advocate in all health-related matters, including the appropriate use of consultants, other health services, and community resources.

## Services Provided:

### SAME DAY APPOINTMENTS AVAILABLE
