

Texas Tech University Health Sciences Center

Information Technology Strategic Goals

Goal Statement #1	TTUHSC will maintain an integrated information technology environment that provides secure and appropriate access to online resources and services.
Objective #1	Information Technology will provide quality services that meet constituents' needs.
Strategy #1	Disparate information systems will be integrated to provide quality services to constituents.
Strategy #2	A standardized technology platform will be used to foster collaboration and interoperability as well as provide uniformity in system administration.
Objective #2	Strategic information will be secured, organized, and accessible as appropriate.
Strategy #1	Progressive security measures will be used to protect the integrity of Institutional data and to provide appropriate access.
Strategy #2	A common data repository will be maintained to enable access to needed data and information.

Goal Statement #2	TTUHSC's multi-campus information resource infrastructure will be organized and managed in an efficient and effective manner.
Objective #1	Critical Institutional processes will be strategically integrated and managed to provide seamless operations.
Strategy #1	Major information technology systems will be centrally managed at the Institutional level.
Strategy #2	Regional campuses will serve as back-up data repositories to provide redundancy.
Objective #2	The network infrastructure will provide access to integrated services throughout the Health Sciences Center's multi-campus system.
Strategy #1	Constituents will have access to multiple technologies across all campuses through a single sign-on authentication process.
Strategy #2	Hardware and software standards based on best practices will be implemented at all campuses to promote interoperability across the systems.

Goal Statement #3	TTUHSC will provide a secure information resources environment.
Objective #1	Users will have secure access to needed information and services.
Strategy #1	Contemporary technology will be deployed and managed to secure Institutional information resources.
Strategy #2	Constituents will be able to access needed data on a secure platform via the Intranet and Internet utilizing web interfaces.
Objective #2	The information environment will be managed to meet the needs of internal and external constituents.
Strategy #1	Constituents will be informed and educated on how to access information technology resources and services.
Strategy #2	Constituent needs assessments will be used to determine the level of services to be provided.
