The world's smallest patch clamp setup. Providing biggest results.

The Port-a-Patch® NPC®-1

The Port-a-Patch[®] Enjoy electrophysiology

- Increased throughput with high data quality
- Easy-to-use also for non-experts
- High success rates for stable whole cells
- Versatile liquid handling
- Compatible with most amplifiers

- Whole-cell and single channel recordings
- Successful with primary cells
- Voltage and ligand gated ion channels
- Ultra-low noise bilayer recordings
- External and internal perfusion and temperature control

The Port-a-Patch® is a miniaturized patch clamp system enabling the user, regardless of experience, to rapidly generate high quality data. The system has been successfully validated with numerous ion channels expressed in different cell lines, and in a number of different primary cells. The Port-a-Patch® is a turn-key system, with a quick and easy start up for learning patch clamp. High-quality measurements with giga-seals and high success rates can be performed in whole-cell, cell-attached, perforated patch and bilayer recording configurations.

A borosilicate glass chip, NPC®-1, containing a micron sized aperture is used for recordings. A cell is captured from solution, automatically sealed to the chip and the program continues to apply suction pulses until the whole-cell configuration has been reached. Versatile add-ons such as external perfusion, internal perfusion, temperature control and the fluorescence microscope slide make the Port-a-Patch® a very useful and flexible tool for ion channel research.

We offer the Port-a-Patch® with an EPC10 amplifier, but the system is compatible with most amplifiers on the market.

Data Examples

Other voltage gated channels:

Na, 1.2, Na, 1.5, Na, 1.7 and other Na,'s, hEAG, K, 1.3, K, 1.5, Shaker, and other K_v 's, Ca_v 3.1 and other Ca,'s

Other ligand gated channels:

HEK – GABA,

GABA 10 UN

GABA, hGlyRa1, P2X7, CNG, HCN, ASICs, TRPV1, TRPA1, TRPC, TRPM2, TRPM3, TRPM8 etc.

250 pA

Other single channel recordings:

K_v1.2, IP₃, OmpF, MscL, bacterial cytolysin, gramicidin, alamethicin, connexins (Cx26, Cx43), NaChBac, KcsA, K_{ca}1.1 etc.

smooth muscle cells (TRPC)*, *Nature Protocols, 2009, 4(2), 244-255

hT-lymphoblasts (K⁺)*

Hippocampal Granule (BK/Ca,),

hSynoviocytes (TRPC)*, rAstrocytes

(K⁺)*, hNeutrophils (K⁺)*, hVascular

Successfully tested: Primary cells (ion channels):

nan]i[on

chip resistance:	
seal resistance:	> 1 GΩ
whole cell resistance:	
series resistance:	< 10 MΩ
liquid consumption:	
perfusion time constant (Perf. Sys.)	~ 100 ms
internal perfusion time constant:	
avg. whole cell stability:	~ 20 min
successful whole cell recording:	
throughput:	20-50 dp/day

Technical Specifications

A Port-a-Patch® system includes:

- Port-a-Patch[®] recording station (including Faraday top)
- Port-a-Patch[®] Suction Control, USB-controlled (no house vacuum needed)
- Maintenance Kit
- Electrophysiological Recording Solutions Kit
- 500 NPC[®] -1 chips
- PatchControl software (Windows) including sophisticated graphical tools for logging of events
- EPC-10 USB amplifier (HEKA Electronics), system compatible with other amplifiers
- Desktop PC or Notebook
- On-site installation support and training

Add-ons:

- Port-a-Patch® External Perfusion System with laminar flow chamber
- Port-a-Patch[®] Internal Perfusion System
- Port-a-Patch® Temperature Control
- Port-a-Patch[®] Microscope Slide for simultaneous fluorescence measurements

Size and weight:

- Port-a-Patch[®] recording station:
 Size (I x w x h): 17.5 x 9 x 7.5 cm
 Weight: 1.4 kg
- Port-a-Patch[®] Suction Control: Size (I x w x h): 13 x 9 x 7.5 cm Weight: 1kg
