Department of Physiology Seminar Series

Marie-Josée Duran, Ph.D.
Post-Doctoral Research Associate
Department of Physiology, TTUHSC

“Na, K-ATPase and Lipids. A Role for Na, K-ATPase in Atherosclerosis?”

Noon, Friday, September 7, 2001, Room HSC 5BC200

After graduating in Biochemistry from the Université de Provence (Marseille, France), Dr. Marie-Josée Duran completed her Ph.D. in Cellular and Molecular Endocrinology from the Université de la Méditerranée (Marseille, France) in October 2000. For her doctoral project, she worked with Pr. Jean-Michel Maixent on endothelial Na, K-ATPase and its regulation by polyunsaturated fatty acids and cholesterol. She moved to Texas Tech University Health Sciences Center last January to pursue post-doctoral training in Dr. Thomas Pressley’s laboratory. Her research interests include Na, K-ATPase and ion transporters, lipids and vascular biology.
