Souad Sennoune, Ph.D.
Research Associate
Department of Physiology, TTUHSC

“EFFECT OF STREPTOZOTOCIN-INDUCED DIABETES ON RAT LIVER Na⁺,K⁺-ATPase”

Noon, Friday, September 28, 2001, Room HSC 5BC200

After receiving her Ph.D., Dr. Sennoune joined Professor Samuel Levy’s Laboratory of Cardiology in the Faculty of Medicine at Marseille, France. There she worked with a group headed by Professor Jean-Michel Maixent and participated in studies on atrial fibrillation. Dr. Sennoune also worked on a project that showed the implications of Na⁺,K⁺-ATPase in the development of complications from diabetes mellitus. Six months ago, she moved to the Department of Physiology where she joined Dr. Martínez-Zaguilán’s laboratory. Dr. Sennoune is now studying the implications of the V-H-ATPase in breast cancer.
