**Celebrate Advancements in Health Care Education at Museum by Night**

Come experience how Texas Tech University Health Sciences Center (TTUHSC) uses technology to teach the next generation of health care providers at “Museum by Night: The Art of Health Care.” The free event will be held March 28 (Thursday) 6 to 8 p.m. at the Helen Devitt Jones Auditorium and Sculpture Court, at the Museum of Texas Tech University, 3301 Fourth St.

The public is invited to explore state-of-the-art technology from TTUHSC’s simulation training center including computerized manikins, ultrasound and augmented reality. The event also features displays of health care related artifacts from the Preston Smith Library of Health Sciences as well as live music and refreshments.

“We’re excited to have an opportunity to share with the community the various ways our students learn and what makes us a leader in preparing health care professionals to meet the demands of an ever-changing health care environment,” TTUHSC President Tedd L. Mitchell, M.D., said.

A short program at 6:30 p.m. will include remarks by Mitchell, Jill Hoffman, Ph.D., Museum of Texas Tech University acting executive director, and Sharon Decker, RN, Ph.D., director of clinical simulations, at the TTUHSC F. Marie Hall SimLife Center.

Museum visitors will receive a “medical chart” upon arrival to complete by receiving a stamp at each station they visit. Those who complete their charts will be eligible for a door prize.

Museum by Night is a monthly event at the Museum of Texas Tech University offering a variety of programs. “The Art of Health Care” celebrates advancements in health care education as TTUHSC marks its 50th anniversary. For more information, call 806-742-2490.
