Persons needing assistance should
contact the Office of Global Health
for arrangements.

Understanding the Health Profile of Immigrants and Their Relevance to the Health Care System featuring Jeff Dennis, PhD Research Assistant Professor Internal Medicine

Dr. Dennis conducts population health research in the Dept. of Internal Medicine, analyzing large databases to understand disparities in health outcomes or services. He holds a Ph.D. in Sociology from the University of Colorado, with a specialization in population health and demography. In recent years, he has co-authored multiple publications examining the health of Mexican immigrants to the U.S. Prior to coming to TTUHSC, he spent 5 years as an Assistant Professor of Sociology at the University of Texas of the Permian Basin.

The WHO estimates that 214 million people worldwide are international migrants, residing somewhere other than their country of origin. Understanding the health profile of migrant and refugee populations is relevant to both sending and receiving countries for economic reasons, as well as for the provision of health care services. This presentation examines recent research on the health profile of immigrant populations worldwide, with an in-depth focus on immigrants to the United States.
