The Texas Tech University Health Sciences Center has a mission well suited to its location and the public need. Just 20 years ago, the region of West Texas — an area larger than most U.S. states and many countries — had severe medical problems. In this region of 135,000 square miles, Texans had the lowest number of physicians per population in the country. The infant mortality was the highest in the state. Communities could not get doctors, and people were hours away from life-saving health services.

In just two decades the Health Sciences Center has helped turn that situation around with an infusion of new physicians, new nurses, and new allied health specialists in the area. A few specifics show just how far the region has come:

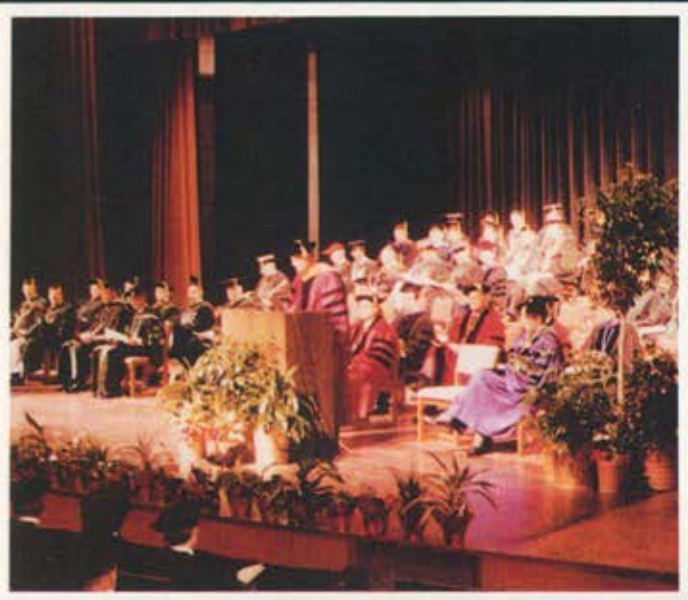

- In 1972, there was one physician for every 1,200 people in West Texas. Today the ratio is one physician for every 900 people. Two out of every three physicians completing residency training at Texas Tech have remained in Texas. Two-thirds of that number now practice in West Texas.
- The infant mortality rate in West Texas, the highest in the state in 1972, is now among the lowest.
- The four regional centers have helped citizens reduce medical complications and the expense of treatment by bringing preventative and ambulatory health care closer to their homes. Primary care clinic visits — one of the cheaper forms of health care — have risen in West Texas from 25,000 in 1972 to 280,000 in 1987.

Sophisticated health care is now available to Texas citizens in this region. Clinics and centers are operated by the Texas Tech Health Sciences Center to treat Alzheimer's disease, Parkinson's disease, kidney disease, cerebral palsy, infertility, substance abuse, and several other serious disorders. Last year, Texas Tech health care professionals at the four regional centers provided more than \$27 million in uncompensated health care to indigent and elderly Texas citizens. This record of accomplishments shows that the Texas Tech Health Sciences Center is fulfilling its intended mission with excellent results.

Texas Tech University  
Texas Tech University Health Sciences Center

Office of the President  
Health Sciences Center/Lubbock, Texas 79430/(806) 743-2900

May 28, 1988

Dear TTUHSC Students and Graduates:

While the Plexus serves many purposes, its most enduring is as a historical record of the people, the events and the accomplishments that make the Texas Tech University Health Sciences Center unique. From that standpoint, this year's Plexus may well prove to be the most significant of all our annuals because the 1987-88 academic year appears as a turning point in our history.

Though we have long made strides toward fulfilling our mission, we have not always been recognized for those accomplishments. I sense a greater, not to mention overdue and well-deserved, recognition across the state of our role and of our successes.

The Special Committee on Post-Secondary Medical, Dental and Allied Health Education during the spring visited the Texas Tech Health Sciences Center, the first time some of its members had seen our facilities firsthand. The committee's visit allowed us to show the members, and to a degree the state, our progress and success as an institution. The committee left with a much fuller appreciation of our mission and the strategy we have followed to accomplish it. And, we came away with a greater assurance that TTUHSC will have a continuing role to play in educating tomorrow's health professionals in Texas.

Throughout these past few trying years, one thing has remained constant and that is you, our students. You have continued to excel on state licensing exams, the most common standard of statewide comparison, and by your performance you have continued to enhance our prestige. You have continued to demonstrate in the classroom and the clinic the highest standards of commitment and professionalism. You have continued to give TTUHSC a good name.

For that, you are to be commended. And for that, this Plexus will serve as a historical acknowledgement of your role in one of the most significant years in our history.

Sincerely,

Lauro F. Cavazos, Ph.D.  
President

## Texas Tech University Health Sciences Center

Office of the Executive Vice President for the Health Sciences Center  
Lubbock, Texas 79430/(806) 743-2938

May 28, 1988

Dear TTUHSC Students and Graduates:

One of my greatest satisfactions over the past year has been the growth of institutional esprit among our students, our faculty, and our staff. Each, of course, plays a vital role in this institution, contributing to the enhancement of its image and the fulfillment of its mission.

But it is you, our students - whether in Amarillo, in El Paso, in Lubbock, or in the Permian Basin - of whom I am particularly proud. You are not only a part of our present, but you will shape our destiny. No matter what I say, what I do, where I go, or to whom I speak, it is your performance as students and your accomplishments as professionals that will put the Texas Tech Health Sciences Center on the map.

Most importantly, the continuation of your active support and enthusiastic participation, upon graduation, is essential to the ongoing success of each of our Schools. Your alma mater is proud of your achievements, and we will always look forward to hearing from you and about you.

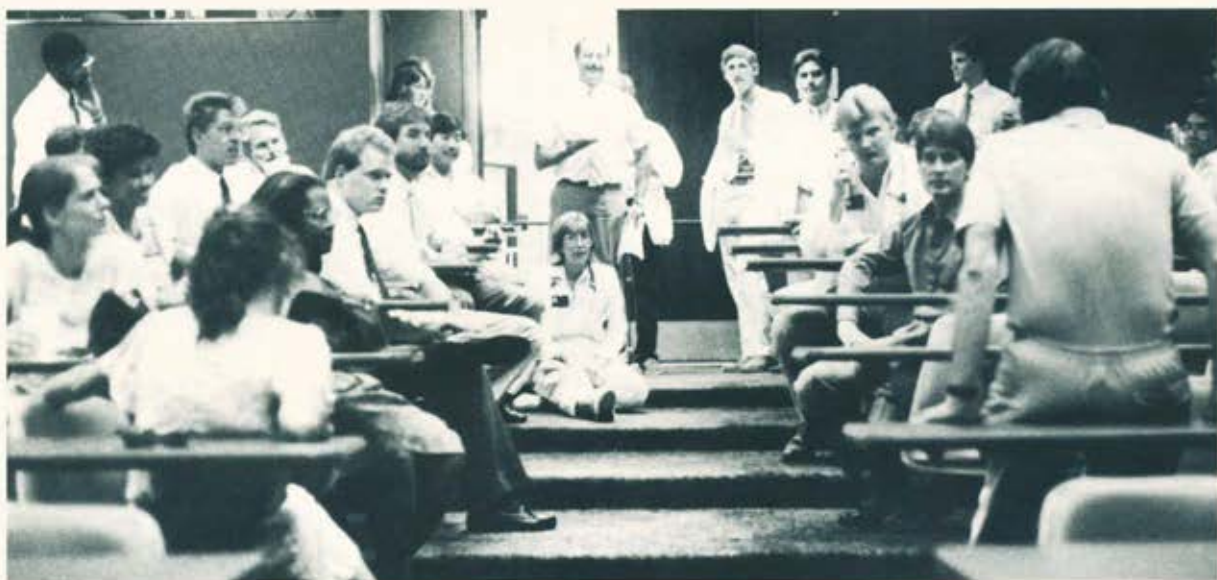

May Texas Tech Health Sciences Center and this book serve to remind you of wisdom gained, friendships formed, and challenges met.

Sincerely,

A handwritten signature in dark ink, reading "Bernie Mittemeyer", with a long horizontal flourish extending to the right.

Bernhard T. Mittemeyer, M.D.  
Executive Vice President  
for the Health Sciences Center

## Texas Tech University Health Sciences Center

SCHOOL OF MEDICINE / Office of the Dean  
Lubbock, Texas 79430 / (806) 743-3000

Dear Medical Students:

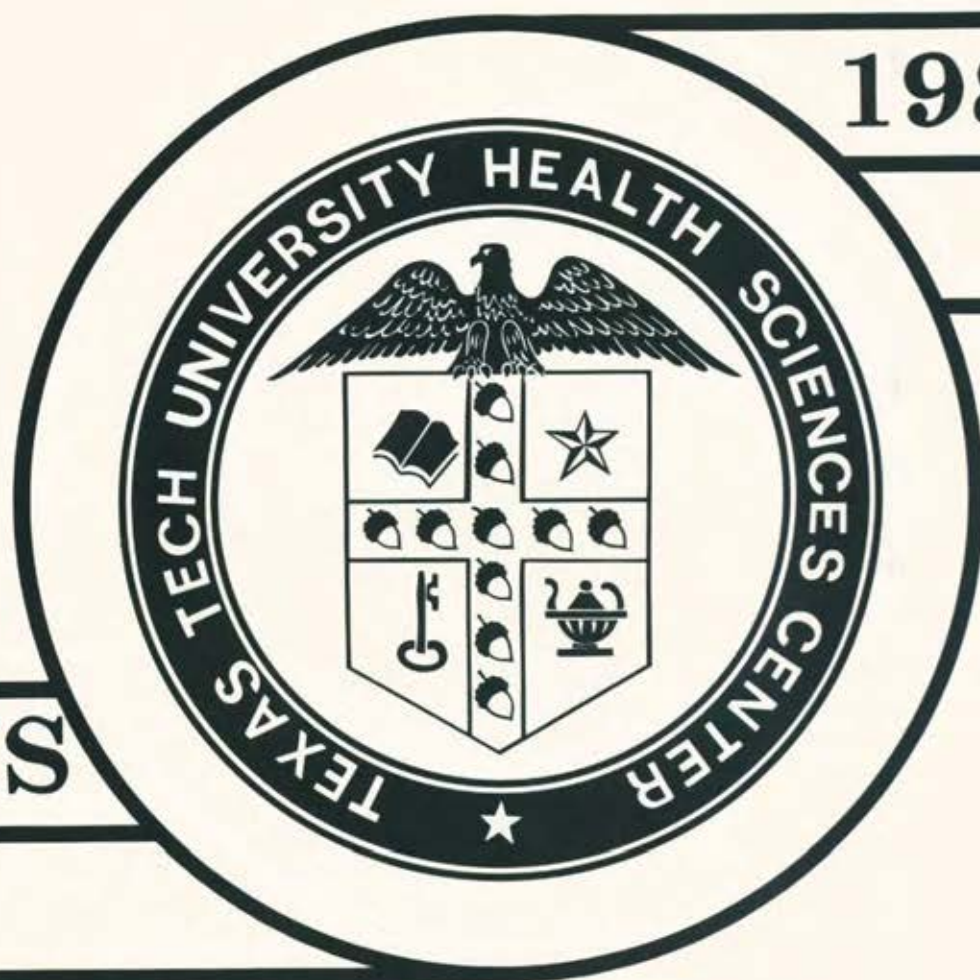

It is both a pleasure and privilege to open this section of the Plexus with a note to you. As I reflect over the years I have spent here at Tech as an orthopaedic surgeon, then as chairman, and now as Dean, I am increasingly proud of the quality of our school, our program, and---above all---our students. We have just completed our accreditation visit from the Liaison Committee on Medical Education, and they have concurred that we truly have developed a high quality curriculum and the resources to produce competent and effective physicians for our contemporary society. We have recently been through an economic downturn in this state and we have consequently had to pare our programs to the bone. At the same time, we can be justly proud that we have maintained that spirit of energy, vivacity and desire for excellence which enabled us to sustain each of our programs at a level of high quality. We are now at a more stable financial level, and we plan to enhance that which is already good. We are a young school; but stable. I am proud of what we have been; I am even more proud of what we are; and I am truly excited about what we are becoming! We will continue to work together in your progression toward becoming the wonderful physicians we know you will be!

Very truly yours,

A handwritten signature in cursive script that reads "J. T. Hartman".

J. T. Hartman, M.D.  
Dean, School of Medicine

## Texas Tech University Health Sciences Center

SCHOOL OF NURSING/Office of the Dean  
Lubbock, Texas 79430 (806) 743-2738

March 22, 1988

Dear TTUHSC Community:

The students at the Texas Tech University Health Sciences Center in 1987-88 have benefits that few have had in the past. While these benefits and opportunities may seem matter-of-course to those of us who are here as faculty and students today, I believe that as you look back at this yearbook sometime in the future, experience will have shown the advantages of an education here. What are they? First, a major mission of this Health Sciences Center is to improve health care in West Texas. As a result, your education has immediate relevance and importance to the people of the region. That type of relevance is something that those in other fields search for. Second, this Health Sciences Center offers the opportunity for multidisciplinary and interdisciplinary interaction with students and faculties from our colleague schools. What better opportunity to learn to collaborate in creating high quality health care? And finally, this Health Sciences Center is young enough and filled with enough imaginative, committed people to assure that innovation and boldness are still a part of our style. That makes it fun to be here knowing we are different as we make a difference. The School of Nursing is an integral part of creating each of these special qualities of the Health Sciences Center. Our students and our faculty reflect the theme of our School's development - Reintegration - in their professional lives. And, as a result, the School that we are is one we are proud of. When those of us who were here in 1987-88 look back at this yearbook, it will bring a sense of both satisfaction and promise. I believe that our pride will only increase over the years.

Sincerely,

A large, stylized handwritten signature in dark ink, likely belonging to Teddy L. Langford.

Teddy L. Langford, R.N., Ph.D.  
Dean and Professor

## Texas Tech University Health Sciences Center

SCHOOL OF ALLIED HEALTH / Office of the Dean  
Lubbock, Texas 79430-0001 / (806) 743-3223

### MEMORANDUM

TO: School of Allied Health Students

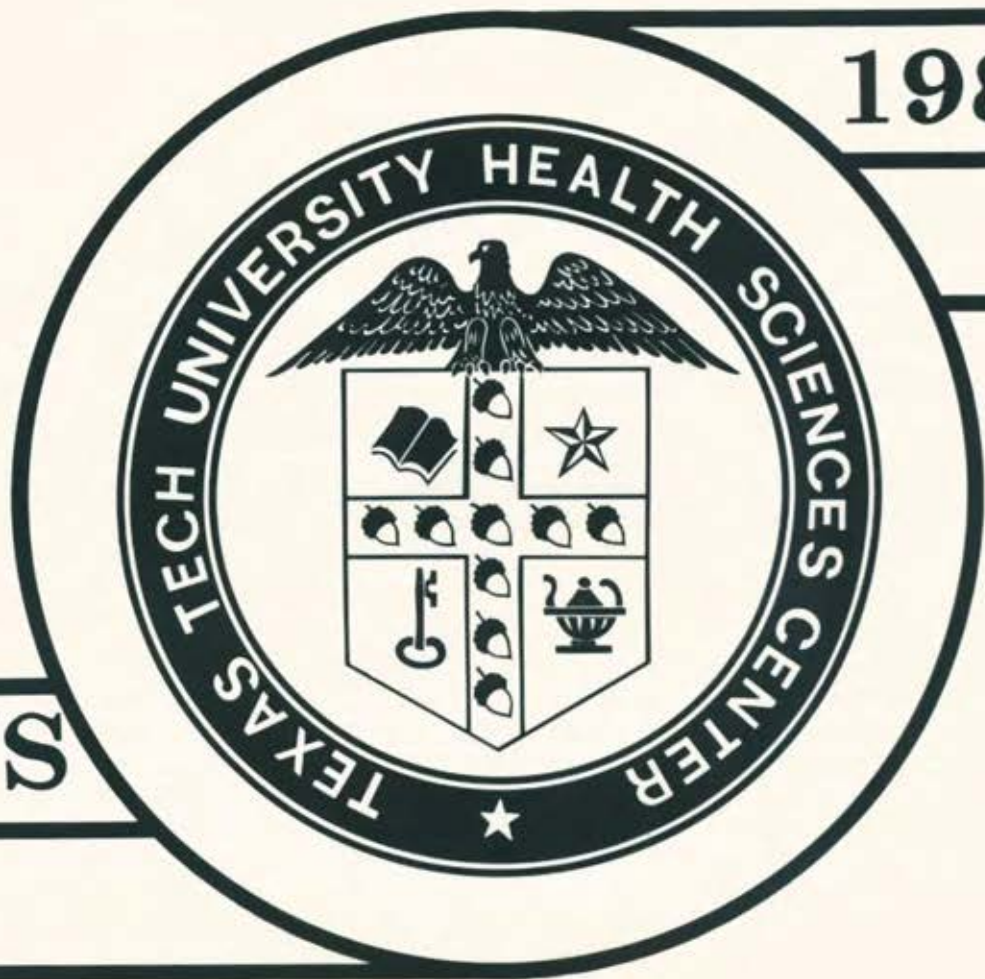

FROM: Dr. Shirley McManigal, Interim Dean *SMC*

SUBJECT: Message from the Dean

By offering upper level baccalaureate degree programs in medical technology, occupational therapy and physical therapy, the School of Allied Health is working to meet the manpower needs of health care institutions in West Texas. Students enter our programs at the junior level and come to us from colleges and universities throughout Texas, including Texas Tech University. Our students must meet rigorous entry level requirements and, once admitted, must maintain a high level of performance. In return, the graduates receive degrees which provide highly marketable job skills and a knowledge base which is applicable to graduate study in basic sciences or a professional school such as medical, dental or veterinary school. Allied health students take their studies very seriously; as graduates they will be expected to deliver quality health care to a deserving public. We choose our students carefully, teach them well and appreciate the reputation for excellence which they bring to us by their success. Our challenge for the future is to add programs of study in other health care professions with similar manpower shortages.

## Treatment of the Whole Person

When an active and whole person is suddenly faced with the reality of a physically disabling condition, the future can be scary. Not knowing whether the limitations are temporary or permanent can cause feelings of frustration. Disabled does not mean unable. Skilled professional therapy can provide hope through the slightest improvement — the retraining of a muscle, a finger, or a limb can set new goals for the next day, and the future becomes not quite as frightening. Progress is not always physical. Physical therapy can also help a patient learn to accept a disabling disease or injury and acceptance is the first step towards a new life for both the patient and the family.

Physical therapy treatment includes gait training, exercise, hydrotherapy, wound care and numerous modalities.

## We Made It In!

Getting into PT school is no easy feat! Some of us were accepted into the program at the end of our senior year of high school. Requirements included higher math, science, and clinical experience. We then had to maintain a B average in science classes while taking the prerequisites for Tech.

Others of us transferred from universities throughout Texas and neighboring states. The application process was a nightmare. There were application forms, letters of recommendation, and transcripts to be sent to all the different PT schools with different deadlines for each program. Then there was the "first wait." Did we get an interview?! This meeting process was a major stress factor: driving and flying to talk with the professors and answering that timeless question: "Why do you want to be a PT?" Meeting the mailman daily at the door was the next step, awaiting the news, whatever it might be. At any rate, being admitted was worth the heartache and trouble, and now here we are, the physical therapy graduating class of 1989.

## Memories

1st day of cadaver dissection — the sights, smells, the head rush . . . not knowing anyone, having to find a partner, and ending up with 3 great people to suffer through a summer of cadaver dissection together . . . physiology labs . . . Erika eating the center of her brownies for the bake sale . . . the lab — pizza deliveries, pillow fights . . . Barbie dolls flying in from DFW . . . Bill — skeleton arm, practical jokes . . . wondering how the Srs. survived this program . . . Janet teaching us how to shave a balloon covered with shaving cream . . . "Smile, your cadaver loves you" . . . shooting the bird in Herc's class. Where were you? I had a stand-by flight and . . . "Guess what? I'm engaged . . . deciding which semester drove us to the edge of insanity . . . Norma, do you know our names yet? Jennifer, thanks for all the help

## PT's — An Active Part of the Community

This year the Class of '89 was involved with many activities which benefitted the Lubbock community and contributed to fundraising for the National PT convention in Las Vegas.

We sponsored a blood drive for United Blood services of Lubbock. We had a Bowl-a-thon for MDA raising \$530 and helped with the MDA and Easter Seals Telethons.

In addition to the usual bake sales, the jr. class hoped to win the FM 99 Scavenger Hunt. We collected items like personalized videotapes and recordings, and the original Barbie.

We also used our skill to give relaxation massages after class. Determination will get you anywhere — we just wanted to go as far as Las Vegas.

## On the Edge

As the Class of '89 gathered for the first time on June 1, 1987, they embarked on a long, tortuous journey down the road next to fulfilling their goals of becoming PTs. Although they knew it would be a tough road to travel they also knew it would be worth it in the end.

To help maintain sanity while struggling through school, students found themselves doing all sorts of things. The rec center usually found several PT students releasing "stress" on the racketball court or in the mat room doing aerobics. Happy hours and free food buffets were also favorites for relieving tension. A way to pass time (during class of course) was to plan for the weekend ahead, even if it was only Monday! Looking forward to seeing a special friend from far away or spending extra time with one near seemed to make PT school a little more bearable.

Although school is tough, the friendships we have developed seem to make it more enjoyable. We keep reminding each other that all of our hard work will pay off one day real soon.

# P LAN:

*clockwise: He's got the cutest little baby face! Jill practices Medco as Chris observes. Paul and Dee practice. Superwoman: Jennifer: wife, mother, student, teacher, and friend.*

# So What's the Plan?

Now that we have made it through the most grueling two years of our lives, it comes time to step into our new roles as professional physical therapists. Saying goodbye to dear friends with whom we have suffered is never an easy task. Many of us are getting married and moving away, others are just moving away. The bottom line is we are splitting up, and we will miss each other — and maybe even PT school. (well, maybe)

The Texas Tech University Health Sciences Center has a mission well suited to its location and the public need. Just 20 years ago, the region of West Texas — an area larger than most U.S. states and many countries — had severe medical problems. In this region of 135,000 square miles, Texans had the lowest number of physicians per population in the country. The infant mortality was the highest in the state. Communities could not get doctors, and people were hours away from life-saving health services.

In just two decades the Health Sciences Center has helped turn that situation around with an infusion of new physicians, new nurses, and new allied health specialists in the area. A few specifics show just how far the region has come:

- In 1972, there was one physician for every 1,200 people in West Texas. Today the ratio is one physician for every 900 people. Two out of every three physicians completing residency training at Texas Tech have remained in Texas. Two-thirds of that number now practice in West Texas.
- The infant mortality rate in West Texas, the highest in the state in 1972, is now among the lowest.
- The four regional centers have helped citizens reduce medical complications and the expense of treatment by bringing preventative and ambulatory health care closer to their homes. Primary care clinic visits — one of the cheaper forms of health care — have risen in West Texas from 25,000 in 1972 to 280,000 in 1987.

Sophisticated health care is now available to Texas citizens in this region. Clinics and centers are operated by the Texas Tech Health Sciences Center to treat Alzheimer's disease, Parkinson's disease, kidney disease, cerebral palsy, infertility, substance abuse, and several other serious disorders. Last year, Texas Tech health care professionals at the four regional centers provided more than \$27 million in uncompensated health care to indigent and elderly Texas citizens. This record of accomplishments shows that the Texas Tech Health Sciences Center is fulfilling its intended mission with excellent results.
