ADULT INFECTIOUS DISEASE ROTATION

1. Rotation Details
   - 1 month block
   - Inpatient services - University Medical Center
   - Outpatient services - Weekly Infectious Disease Clinic TTUHSC Internal Medicine Clinic
     - AIDS Clinic administered by the Planned Parenthood Center, Lubbock, TX

2. Educational Objectives
   - At the completion of this 1 month Infectious Disease rotation, the resident will have developed competency in the evaluation and management of patients with acute and chronic adult infectious diseases.
   - At the end of this rotation, the Internal Medicine Resident will be able to discuss the attitudes and ethical considerations necessary for the care of patients with adult infectious diseases coming from culturally diverse backgrounds and having illnesses that may lead to socialization problems such as AIDS

3. Educational Methods and Resources
   - Disease mix - All areas of inpatient adult infectious diseases, including surgery, obstetrics, oncology, and the pain service.
     - Outpatient services focus upon patients from hospital consultation follow-up, new patient evaluations of acute and chronic infectious diseases and AIDS patients who are stable.
   - Clinical activities - ID Consultation, initial evaluations and then daily follow-up on inpatient consultative service. In addition, there will be an outpatient follow-up clinic and new patient evaluation in the outpatient clinics
     - Appropriate diagnostic and therapeutic procedures including culture methods, the ability to read gram stains, and evaluation of laboratory and radiologic data, referable to adult infectious diseases
     - Interaction with consulting physicians, nurses, and ancillary personnel
     - Completing the Infectious Disease Consultation and daily record keeping and clinic record keeping
   - Reading - MKSAP-14 series (Infectious Disease and HIV/AIDS sections)
     - Current edition of Harrison’s Textbook of Internal Medicine
- Current edition of Mandell, Dolan, and Bennett-Principles and Practice of Infectious Diseases
- Teaching - Daily teaching rounds and patient management rounds will be conducted throughout the month

4. Evaluation Methods

- Review of oral presentations and chart documentation
- Assessment of knowledge of Infectious Diseases by faculty questions regarding pathophysiology, clinical presentation, and therapy of individual patients seen on the service
- Summative evaluation form at the end of the rotation to be discussed with the resident

5. Supervision and Responsibilities

- Infectious Disease faculty will supervise all resident activities
- The resident will be responsible for the initial infectious disease consultation, the transcribing of that consultative document for the inpatient or outpatient chart, daily patient evaluation and progress notes on the inpatient consultative service and appropriate progress notes in the clinic outpatient service, and procedural notations
