Accessibility and the ADA

Have you ever used captions or subtitles while watching your favorite Netflix show? Do you use Siri to assist you on your smartphone? Believe it or not, these things were initially designed for accessibility, but everyone uses them to their advantage. You don't have to have a hearing impairment to benefit from captions or subtitles. You don't have to have a visual impairment for Siri to help you navigate your smartphone. These valuable additions to our world today, along with numerous others, align with the power of universal design for learning and its importance in the classroom for the diverse learners of today. If everyone could access their educational course content in multiple ways (audio, video, captions/transcripts, etc.), then learners would focus their attention on the content rather than how to make the information work for their individual study process. In a study conducted at the University of South Florida – St. Petersburg, 99% of students reported captions were helpful.

To our benefit, TTUHSC has recently announced implementation of automatic machine captioning of all Techlink lecture recordings that are automatically uploaded to our streaming host service. More details are on the Announcements. Zoom recordings are not included, but captions/transcripts are available in Zoom meetings or you can ask for them to be turned on. Visit the SolveIT website for further instructions.

If you are a student who needs additional access to course content, or ADA accommodations of any kind, please reach out to Student Disability Services at 806-743-1926 or tamara.mancini@ttuhsc.edu. If you are faculty or staff and need further assistance, please also contact Student Disability Services.
